METHODOLOGICAL NOTES

1. In Malta there is no CHP generation.
2. Data for Luxembourg are estimations.
3. Other fuels includes industrial wastes and coal gases.
4. Spain declared all renewables and wastes under category "Other renewables and wastes".
5. According to the implementation guidelines of the Directive 2004/8/EC the fuel input into CHP refers to fuel used for CHP heat and electricity production, i.e. fuel for non-CHP electricity and heat is excluded. However, these guidelines have not been adopted yet, and the reporting practises may vary between Member States.
6. The fuel input is based on Net Calorific Value.
7. The Main activity producers generate electricity and heat for sale as their primary activity. Autoproducers generate electricity and heat wholly or partially for their own use as an activity which supports their primary activity.
8. Share of CHP electricity generation is calculated as the CHP electricity generation divided by the total gross electricity generation, including generation in pumped storage power stations.
